

What is su-re.co?

Established in 2015, su-re.co (Sustainability and Resilience.co) is an environmental Think-Do-Be-Tank based in Bali. Our vision is to be a **reliable gift maker** for the planet and the future. It is to create a **sustainable and resilient community (be) that can transform good intentions and deep thought (think) into direct action (do)**. Our mission is to make the vertical integration of sustainability which synergies research, technologies, and learning by meaningful business. In short, su-re.co's strategy is "a vertically integration for sustainability".

SU-RE.CO NEWS

 Vol #17

WWW.SU-RE.CO

Did you know? We also work together with other parties to develop climate-smart products from local farmers as we believe collaboration is key!

Our delightful su-re.cocoa becomes a favorite! It is produced by Primo Chocolate in Tabanan, Bali. It is such a lovely place to explore more about chocolate production.

By empowering the women around the area, the process of making su-re.cocoa is mostly done by hands with high attention to hygiene.

Biogas for Farmers

June was the month of the environment! The world celebrated the World Environment Day. During this challenging situation, we miss the moment of sharing gifts for farmers and nature. Here we share one of the moments of biogas installation for Bapak Wayan Ratep's family in Bali. They will be ready to say goodbye to firewood and shift to the clean energy resources and help take care of our environment.

Things to do at home : Gardening!

be-tank

Looking for a meaningful activity that you can do at home? Gardening might be one of those! At our office in Pererenan, we have started our new gardening project in the beginning of last month.

Pumpkin and watermelon are growing well, making our backyard more beautiful and fresher! Here is the progress in a month! We are so excited to harvest it!

Stories Beyond the Sciences

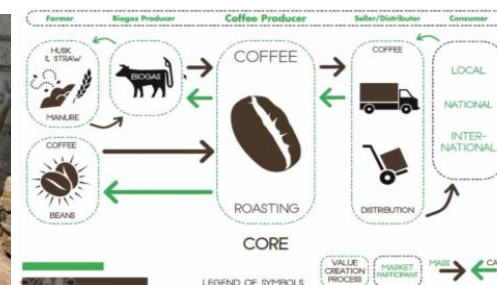

Science is one the important parts of our works at su-re.co. All of our programs from engineering to business are also started and proven by research and science! Led by our CEO, Takeshi

Takama, our team periodically produces research paper on climate change, biogas and sustainability. Together with our partners, staff and intern we deeply analyze the issue and implement it to our programs.

Get to know our recent publications for free on our website bit.ly/surecoscience.

Another great news came from our intern in the Netherlands! Vincent of su-re.co, who is

working on the experiment on the biogas system, got covered by the local newspaper in the Netherlands. As the temperature is also the critical factor of this experiment, he was trying to find a space to conduct this research that is nearly similar to the temperature in Bali and got the support from the government! It makes the experiment like it is conducted "in Bali".

(Continued from front page)

They manually sort husk to get cacao nibs then slowly grind the cacao nibs using a machine that was made in Bali! We are also glad to see that the production is also trying to be zero waste. The cacao husk is collected and used for compost. As we take it from the nature, we should give it back to nature to achieve a sustainable and resilient future for all of us. Get [su-re.cocoa](https://su-re.co/cocoa) on Tokopedia: su-reco and be part of the action to fight against climate change with farmers!
