

What is su-re.co?

su-re.co info

Established in 2015, su-re.co (Sustainability and Resilience.co) is an environmental Think-Do-Be-Tank based in Bali. Our vision is to be the giftmaker for the earth. To achieve this vision, we set a mission. We deliver well-thought outcomes because we need scientifically proven sustainable and resilient solutions. We work on think, do, be activities, together.

A Small Action to Start 2021

Time flies~

We have passed a challenging year in 2020 and we are now must be ready to start a new journey in 2021.

What if we start with doing a small action to support farmers and nature by sharing sustainable gifts? For years, su-re.co has been supporting coffee and cacao farmers to market their products in fair

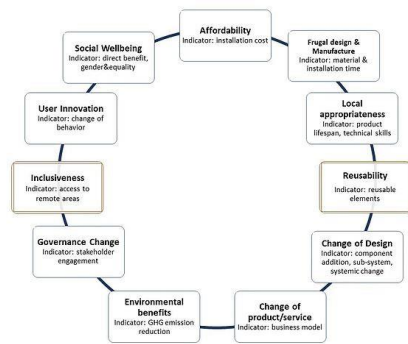

price. Some of the sales will be given back to farmers in the form of biogas, and climate field schools. ...to be continued in the next page.

Did you know?

Science updates!

Everything we do is scientifically proven. Check out our most recent publications to learn more about the technical research aspects behind our activities.

A New Research Paper Will Be Published Soon!

The Editorial Board of the book project "Handbook of Climate Change Management" just accepted our manuscript entitled "Frugal Eco-Innovation for Addressing Climate Change in Emerging Countries: Case of biogas digester in Indonesia" (Author(s): Ismail, C., Wiopranoto, F., Takama, T., Lieu, J., Virla, L.). It is now in the process of final reviews corrections, so be sure to keep tabs on [su-re.co/think](https://www.su-re.co/think) to read about how and why the design of our digesters are the most suitable for rural households!

Risks, Barriers and Responses to Indonesia's Biogas Development

think-do-tank

Why did we choose to develop a biogas energy alternative, and how did we deal with the risks and barriers that came with it?

su-re.co and SEI (Stockholm Environment Institute) collaborate to create a brief that envisions the future of biogas usage in Indonesia. <https://www.su-re.co/think>

Online Training for Japanese Students!

This challenging situation on the other side also opens some opportunities for us to learn from everywhere, wider the learning exchange across countries. In 2020, our CEO and founder – Takeshi Takama taught sustainability for students of Clark High School in Japan.

The students were not only learning and listening to presentation but were active to practice and explore their creativity to create a solution. One of the interesting topics was the sustainable mask. Some of the ideas were very unique.

A student came out with the idea of edible mask, nap mask, mask with microphone, jelly mask, beak mask, water-soluble paper mask, even a mask that was inspired by culture. They all made the masks based on their experiences. By asking "why"

are they making those masks will help them to find vision.

In last year, we have also conducted 3 online ACT training in collaboration with TigerMOV. Before pandemic, the students can get hands-on experiences by exploring Bali and meet with some local NGOs and local communities. However, in this online ACT we work more on social media campaign and creating videos on a particular theme. One of the most important issues talked in this program is waste management.

A Small Action To Start 2021!

(Continued from front page)

We hope, everyone will have a good year ahead! To welcome this new year, let's start with sharing gifts for your family and friends. Our climate-smart coffee and chocolate might be a perfect option! Furthermore, you can also directly donating for a biogas for farmer through Kita Bisa and Lindungi Hutan. Click on these links for more information!
