From Bali to Bajawa: Turning Waste into Treasure

Rikardus (Coffee Farmer) with Fabian (Giftmaker)

We had not been to Bajawa in a long time. On September 17, some of our giftmakers, Fabian, Okta, and Sarah, flew from Bali to Bajawa to participate in some activities with the coffee farmers. In collaboration with Rikolto Indonesia, we conducted training for the MPIG Arabica Flores Bajawa and their coffee cooperative. We invited Gagang Ichwanul, an expert, to support our workshop. The farmers were eager to broaden their capabilities by utilizing the coffee cherry skin in livestock feed and improving its quality.

Gagang Ichwanul (Master Trainer)

In addition, we inspect some of the livestock and search for potential biogas installation sites. We are delighted to have finally met our main local champion coffee farmers, Rikardus and Albert; it was an incredible workshop and trip overall!

Biogas Initiative for Agriculture in Bali and Flores funded by carbon offset

su-re.co continues to improve the biogas installation and make it accessible for farmers through a project funded by IKI Small Grant of GIZ. The project aims to create a proven scalable and sustainable management model of Green House Gases (GHG) emission reductions using our biogas digesters funded by carbon offset. We have officially signed the contract and started to create more digesters, arrange Climate Field schools, and create a carbon offset platform with blockchain. Stay tuned!

Join our THINK – Research Team

Are you passionate about research and keen to further develop your skill? This opportunity is the one you're looking for!

su-re.co's THINK team works on creating well-thought gifts in the realm

of climate change, renewable energy, and green business. Get the experience to work remotely in a multicultural environment and to work with international experts! Details information can be read on <https://su-re.co/hiring-and-internship> ☺

France x Indonesia in su-re.coop

A brand new product has just been launched! Enjoy the delicious kenari nuts from Maluku in the crunchy croquant. The Croquant is a Mediterranean biscuit that is popular in Southern France. We modified the traditional recipe to incorporate and highlight the flavor of kenari nuts (*Canarium indicum*) and aren sugar (*Arenga pinnata*).

We collaborate with Sinar Hijau Venture to work with indigenous communities in assisting them to organize collectively of advancing the value chain and cease new market opportunities for natural forest products. Fun fact: The harvesting area is also targeted for sustainable agroforestry chain development!

Kenari Nuts have a rich, flavorful, and creamy flavor that melts in the mouth after biting into them. While Macadamia nuts are frequently described as having a "buttery" flavor, Kenari offer even more in this regard. If you love Macadamia or almond nuts, you might also love the Kenari Nuts too! It is a good source of essential nutrients as well as a good source of dietary fat.

Grab this climate-smart croquant now! It will be a perfect company for your morning coffee or even your afternoon tea.

By purchasing this product, you directly contribute to climate change adaptation through renewable energy and climate education for farmers that will benefit our climate.

From Bali to Bajawa: Turning Waste into Treasure

We are also happy to enjoy the beautiful scenery of Bajawa and meet one of our biogas recipients – Fransiscus, who dedicates himself to creating a fully organic farm. “Manure is not dirty; what are my descendants going to eat if we continue to use chemicals,” said Fransiscus.
